

TELEDYNE DALSA
Everywhereyoulook™

Part of the Teledyne Imaging Group

03-032-20257-02 Application Note for Camera Cables and Long Distance Solutions

I. Comparison

Type	Camera Link	GigE Vision	CoaXPress (CXP6)	Camera Link HS C2 Copper *	Camera Link HS CX4 Active Optical Cable	CLHS SFP+ Fibre Optic Cable *
Appearance						
Max Length	10 to 12 m	100 m, Can be extended to 300 m**	30 m	15 m 5 m (with 5.0 Gbps)	100 m	300 m**
Bandwidth	0.56 Gbps/Lane *	1 Gbps to 25 Gbps	6.25 Gbps / Lane	3.125 and 5.0 Gbps	Up to 8.4 GBps	10.3125 Gbps
Total Data Throughput	850 MBps (with 2 cables – CL Deca Mode)	117 MBps (1Gbps) 292 MBps (2.5Gbps) 585 MBps (5Gbps) 1100 MBps (10Gbps)	0.6 GBps(1 lane) 1.2 GBps(2 lanes) 2.4 GBps(4 lanes)	2.1 GBps (7 lanes) 3.3 GBps (7 lanes)	Up to 8.4 GBps	1.2 GBps (1 lane) 4.8 GBps (4 lanes)
Cable /connector vendor	Alysium Tech, CEI (Component Express Inc), 3M, ...	Alysium Tech, CEI, Intercon1, Hewtech, ...	Alysium Tech, CEI, Intercon1, Hewtech ...	Alysium Tech, CEI, Intercon1, Hewtech	Alysium Tech, Hewtech,	CEI, Cisco, ...
Concept cost	\$\$\$ for 10m/cable	\$ for 10m \$\$ for 100m	\$ for 10/15/20m (1 lanes) \$\$ for 10/15/20m (4 lanes)	\$\$\$ for 15m/cable	\$\$\$ for 20/30/100m \$\$\$ for 30m \$\$\$ for 100m	 \$ for module  \$ for 1m/10m
Camera family Associated	Piranha CL series, Linea CL series, Nano-CL series,	Linea 1-GigE series, Nano 1-GigE series, Nano 5-GigE series, Genie TS series, Spyder GigE series,	Nano-CXP series	Piranha XL series, Linea (CLHS model), Falcon4,	Piranha XL series, Linea ML series Linea HS series	Linea ML series

Advantages	Various camera choices	Long distance** Multicast Flexibility Light weight, Low cost	High data rate Power over cable	High data rate,	High bandwidth Immunity to EMI Flexibility Light weight Low cost	Long distance** High bandwidth Immunity to EMI Flexibility Light weight Low cost
Teledyne Frame grabber	Xtium-CL MX4, Xcelera CL series	Not Required	Xtium-CXP PX8	Xtium-CLHS PX8, Xtium-CLHS PX4	Xtium2-CLHS PX8	Xtium2-CLHS FX8
FG Appearance		N/A				

Note:

- **Gbps** stands for Gigabit per second (1 Gbit is equal to 125 megabytes (MB))
- **GBps** stands for Gigabyte per second
- **SFP** stands for Small Form-factor Pluggable transceiver. It is a compact, hot-pluggable optical module transceiver used for data communication applications. SFP modules are commonly available in several different categories.
- **SFP**: 1 to 2.5 Gbps
- **SFP+**: 10 Gbps, etc.
- **C2** is the official CLHS name given to CX4 cable, **SFF-8470** is the specification of the connector.
- Fibre Optic Cables cannot be used with Falcon4
- GigE Vision speeds are vary, depends on interface speed and cable type.

Interface Speed	Max DATA Bandwidth	Cable Type and Max Distance	Cameras
1 Gbps GigE Vision	117 MBps	Cat5e – 100 m, Cat 6 – 100 m	Linea 1-GigE, Genie Nano1-GigE, Genie TS, Spyder GigE
2.5 Gbps GigE Vision	292 MBps	Cat5e – 50 m, Cat 6 -100 m	Nano-5G
5 Gbps GigE Vision	585 MBps	Cat5e – 50 m, Cat6 – 75 m, Cat6A – 100 m	Nano-5G
10 Gbps GigE Vision	1100 MBps	Cat7 – 100 m, Cat 6A – 50 m, Cat 6 – 35 m	

II. Long Cable Solutions**

As you can see from above table, the CLHS SFP+ Fibre Optic Cable or GigE Vision and SFP+ Fibre Optic Cable are the best solutions you can choose from when your application needs cable length beyond 100 meters. There are SFP+ module can achieve 20 kilometers, however, our current standard cameras are designed to achieve up to 300 meters. The following are the details how to use them.

A. GigE Vision + SFP+ Fibre Optic Cable Solution – Up to 300 meters

A copper Gigabit cable can be extended up to 20,000 meters with two off-the-shelf Gigabit Ethernet media converters and a fibre optic cable. This solution is also a simple and relatively low cost solution.

There are many Ethernet media converters on the market users can choose from, in general, the cost is within \$\$ per piece.

B. SFP+ Fibre Optic Cable Solution – 300 meters

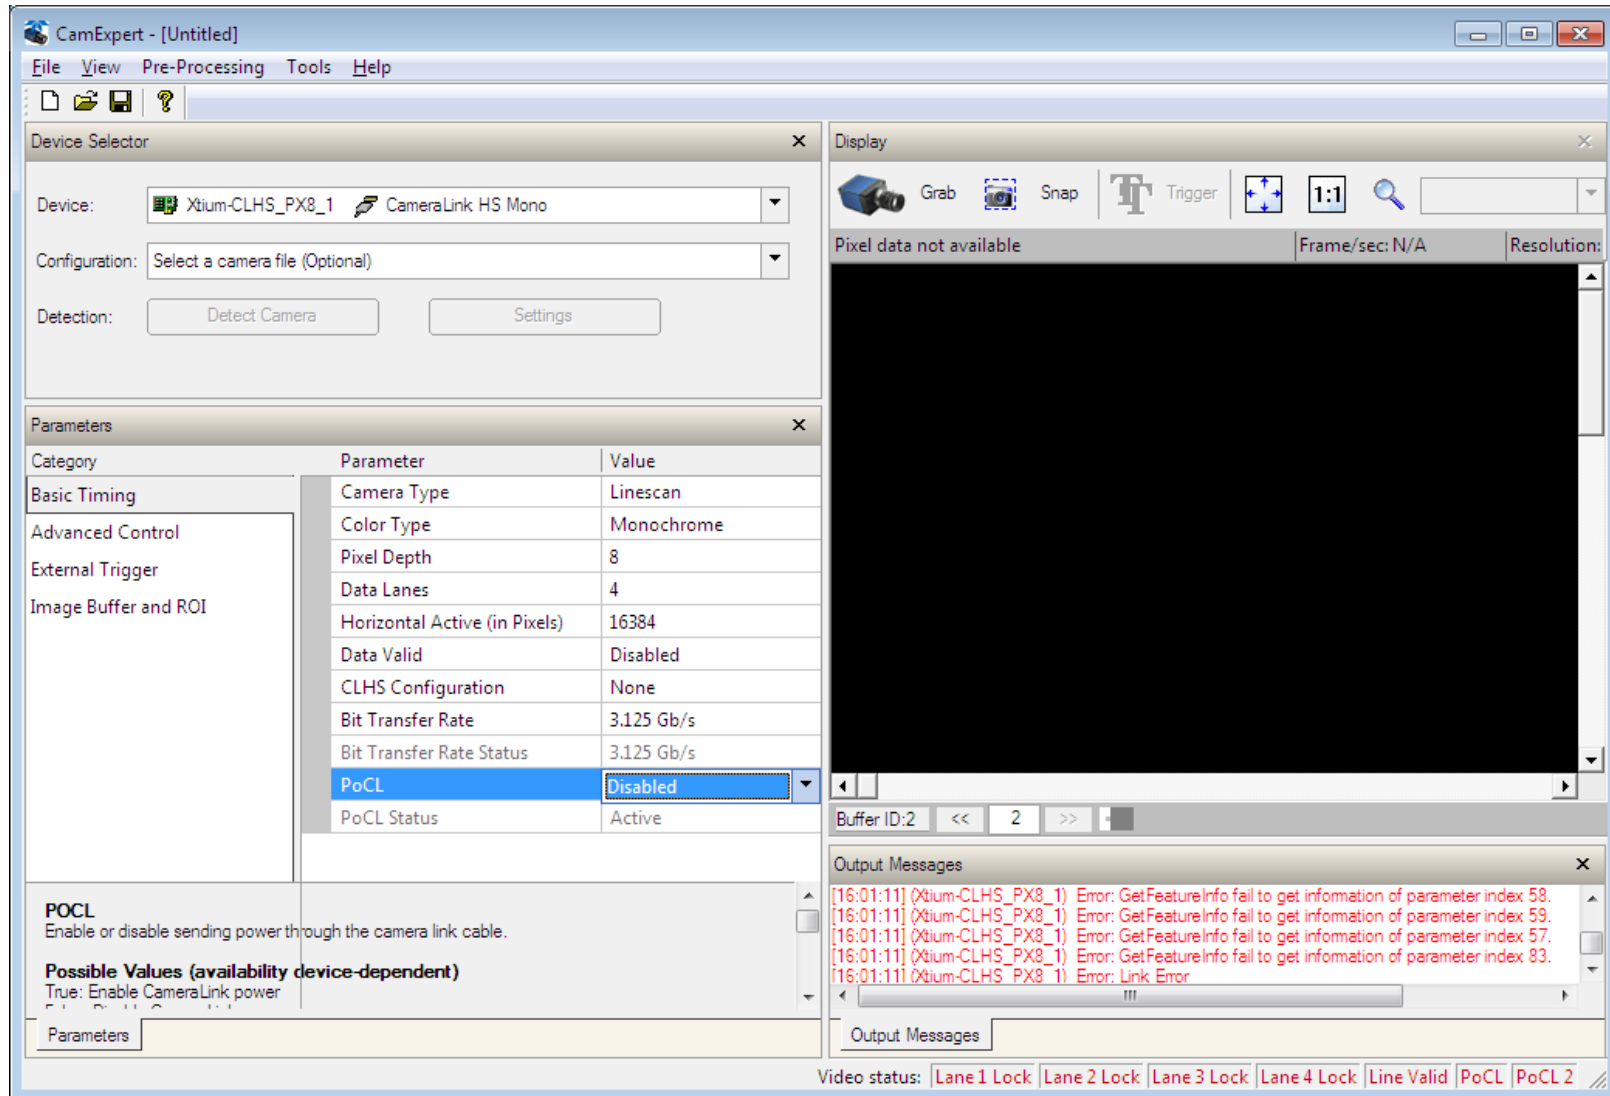

The use of fibre optic cables is quite simple, the following few steps will make it work.

Step 1 Connect an available camera (Linea CLHS in this example) with a fibre optic cable instead of CX4, and power up. Please note that the C2 fibre optic cable needs the camera end plugged into the camera.

If there is no such mark, and the host PC cannot detect the camera after step 3, you may swap the cable ends and try again. No harm will be done by swapping the ends.

Step 2 Open the CamExpert and select the right frame grabber.

The screenshot shows the CamExpert software interface. The 'Device Selector' window is open, showing the selected device as 'Xtium-CLHS_PX8_1' with a 'CameraLink HS Mono' icon. The 'Parameters' window is also open, displaying a table of camera settings.

Category	Parameter	Value
Basic Timing	Camera Type	Linescan
Advanced Control	Color Type	Monochrome
External Trigger	Pixel Depth	8
Image Buffer and ROI	Data Lanes	4
	Horizontal Active (in Pixels)	16384
	Data Valid	Disabled
	CLHS Configuration	None
	Bit Transfer Rate	3.125 Gb/s
	Bit Transfer Rate Status	3.125 Gb/s
	PoCL	Disabled
	PoCL Status	Active

Below the table, the 'POCL' section is expanded, showing the text: 'Enable or disable sending power through the camera link cable.' and 'Possible Values (availability device-dependent): True: Enable CameraLink power'. The 'Output Messages' window at the bottom right shows several error messages in red text, including 'Error: GetFeatureInfo fail to get information of parameter index 58.', 'Error: GetFeatureInfo fail to get information of parameter index 59.', 'Error: GetFeatureInfo fail to get information of parameter index 57.', 'Error: GetFeatureInfo fail to get information of parameter index 83.', and 'Error: Link Error'. The status bar at the bottom indicates 'Video status: Lane 1 Lock Lane 2 Lock Lane 3 Lock Lane 4 Lock Line Valid PoCL PoCL 2'.

The camera has not been detected at this point.

Step 3 Select the Enable in the PoCL pulldown menu. This supplies power to the electrical-to-optic signal transmitter.

The screenshot shows a 'Parameters' dialog box with a table of camera settings. The 'PoCL' parameter is highlighted, and its dropdown menu is open, showing 'Enable' as the selected option.

Category	Parameter	Value
Basic Timing	Camera Type	Linescan
Advanced Control	Color Type	Monochrome
External Trigger	Pixel Depth	8
Image Buffer and ROI	Data Lanes	4
	Horizontal Active (in Pixels)	16384
	Data Valid	Disabled
	CLHS Configuration	None
	Bit Transfer Rate	3.125 Gb/s
	Bit Transfer Rate Status	3.125 Gb/s
	PoCL	Disabled
	PoCL Status	Disabled
		Enable

The fibre cable gets activated and the camera should be detected now.

The screenshot displays the CamExpert software interface with the following components:

- Device Selector:** Device: Xtium-CLHS_PX8_1 CameraLink HS Mono; Configuration: Select a camera file (Optional); Detection: Detect Camera, Settings.
- Parameters:**

Category	Parameter	Value
Attached Camera - Xtium-...	Camera Type	Linescan
	Color Type	Monochrome
	Pixel Depth	8
	Data Lanes	4
	Horizontal Active (in Pixels)	16384
	Data Valid	Disabled
	CLHS Configuration	None
	Bit Transfer Rate	3.125 Gb/s
	Bit Transfer Rate Status	3.125 Gb/s
	PoCL	Enable
	PoCL Status	Active

POCL
Enable or disable sending power through the camera link cable.

Possible Values (availability device-dependent)
True: Enable CameraLink power
False: Disable CameraLink power

Refer to Sapera Parameter in Manual
CORACQ_PRM_POCL_ENABLE
- Display:** Shows a camera feed of a test target with the letters 'N' and 'K'. Status: Pixel data not available, Frame/sec: N/A, Resolution: 16384 Pixels x 1024. Controls include Grab, Snap, Trigger, and a 1:1 magnification view.
- Output Messages:**

```

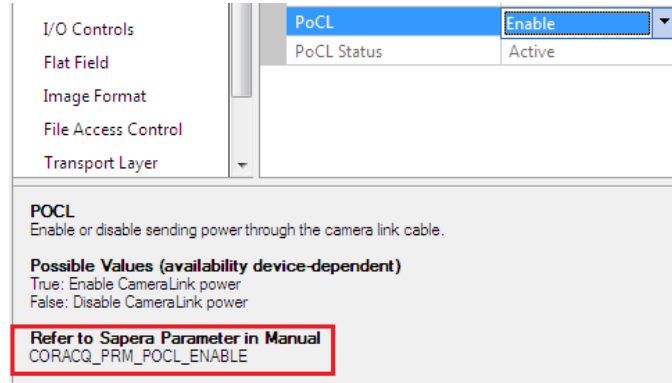

[11:00:33] -- Snap button was clicked.
[11:00:37] -- Snap button was clicked.
[11:00:38] -- Snap button was clicked.

```
- Video status:** Lane 1 Lock | Lane 2 Lock | Lane 3 Lock | Lane 4 Lock | Line Valid | PoCL | PoCL 2

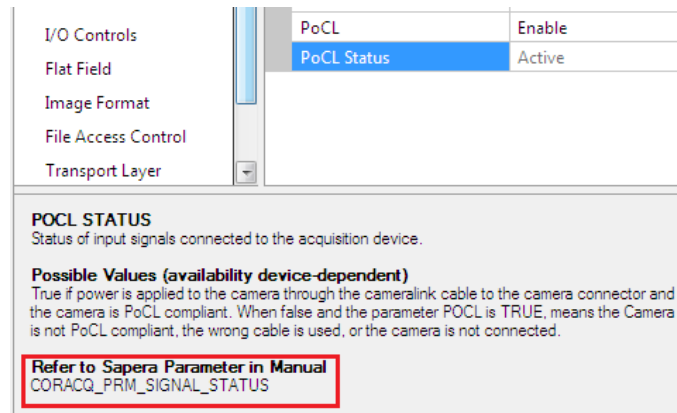

As the camera is detected by the host PC and necessary Lanes, Line Valid are all turned to green color, you can operate the camera like operate with CX4 cables.

These few steps are all you need to activate the fibre cable!

The PoCL in Xtium-CLHS_PX8 is a software trigger. Programmers can find the PoCL function and its status from their function-aid window respectively.

The PoCL status function:

III. Diagnostic Tools

For Teledyne DALSA Nano GigE Vision cameras, there's built in statistic features to monitor communication errors (refers to the Nano User Manual). In case of Teledyne DALSA frame grabber(s), the frame grabber diagnostic tool is a powerful tool for diagnosing communication errors. The program is located under each frame grabber folder.

Execute the program, a window shows up with related information.

Diagnostic Tool

TEST [Icons] Xtium-CLHS_PX8_1

Frame Grabber Information

Field/Value	Value	Min	Max
Driver Version	1.11.01.0266		
Serial Number	H0526020		
PCI Info	Bus #	5	
	Slot #	0	
	Function #	0	
	Bus Total Lanes	4	
	Bus Bit Transfer Rate	Gen 2	
	Bus Payload Size (bytes)	128	
	Bus Request Size (bytes)	512	
PCIe Bandwidth (MB/s)	Achieved Bandwidth	Resource in use	Resource in use
	Maximum Theoretical	Resource in use	
FPGA Temperature (°C)	Measured	92.035	91.788
	Operating Range		0.000
Voltage Aux (V)	Measured	1.766	1.766
	Operating Range		1.710
Voltage Int (V)	Measured	0.996	0.996
	Operating Range		0.970

Lanes Stats

	CRC Error	Video MSG	Packet Buffer Overflow	Resend Flag	8b/10b Error
Lane 1	0	23673309	5	0	0
Lane 2	0	23673312	0	0	0
Lane 3	0	23673316	0	0	0

The digit '5' in the red rectangle indicates there are 5 times packet buffer overflow errors happened. It, however, is happened in the initializing stage, can be ignored. Switch to the CamEXpert and Click Press... beside the Acquisition Stop to stop the communication between the camera and the frame grabber.

Back to the diagnostic tool, right click anywhere on the Lanes Stats area and select the 'Reset Lanes stats.'

Lanes Stats					
	CRC Error	Video MSG	Packet Buffer Overflow	Resend Flag	8b/10b Error
Lane 1	0	1019392	5		0
Lane 2	0	1019390	0		0
Lane 3	0	1019390	0		0
Lane 4	0	1019390	0		0
Lane 5	0	0	0		4142311134

Reset Lanes stats

This resets all parameters in the lane part.

Lanes Stats					
	CRC Error	Video MSG	Packet Buffer Overflow	Resend Flag	8b/10b Error
Lane 1	0	0	0	0	0
Lane 2	0	0	0	0	0
Lane 3	0	0	0	0	0
Lane 4	0	0	0	0	0
Lane 5	0	0	0	0	0
Lane 6	0	0	0	0	0
Lane 7	0	0	0	0	0

Switch to the CamExpert again, click the Press... beside the Acquisition Start.

Back to the tool, you will see Video MSG of those activated lanes are updating and other numbers are remaining in '0' status. The 'Video MSG' shows number of messages have been exchanged between the camera and the frame grabber lane by lane. All the 0s tell you there are no errors have happened.

Lanes Stats					
	CRC Error	Video MSG	Packet Buffer Overflow	Resend Flag	8b/10b Error
Lane 1	0	500936	0	0	0
Lane 2	0	500936	0	0	0
Lane 3	0	500936	0	0	0
Lane 4	0	500936	0	0	0
Lane 5	0	0	0	0	0
Lane 6	0	0	0	0	0
Lane 7	0	0	0	0	0

If errors happen, the tool displays the number of errors with numbers lane by lane, refer to following example.

Lanes Stats					
	CRC Error	Video MSG	Packet Buffer Overflow	Resend Flag	8b/10b Error
Lane 1	0	1019392	5	0	0
Lane 2	0	1019390	0	0	0
Lane 3	0	1019390	0	0	0
Lane 4	0	1019390	0	0	0
Lane 5	0	0	0	0	4142311134
Lane 6	0	0	0	0	141296706
Lane 7	0	0	0	0	3009391495

As you can see, the diagnostic tool is a helpful tool when you dealing with TDALSA frame grabbers.

Should you have any questions, please feel free to contact your local TCS (Technical Customer Support) team.
